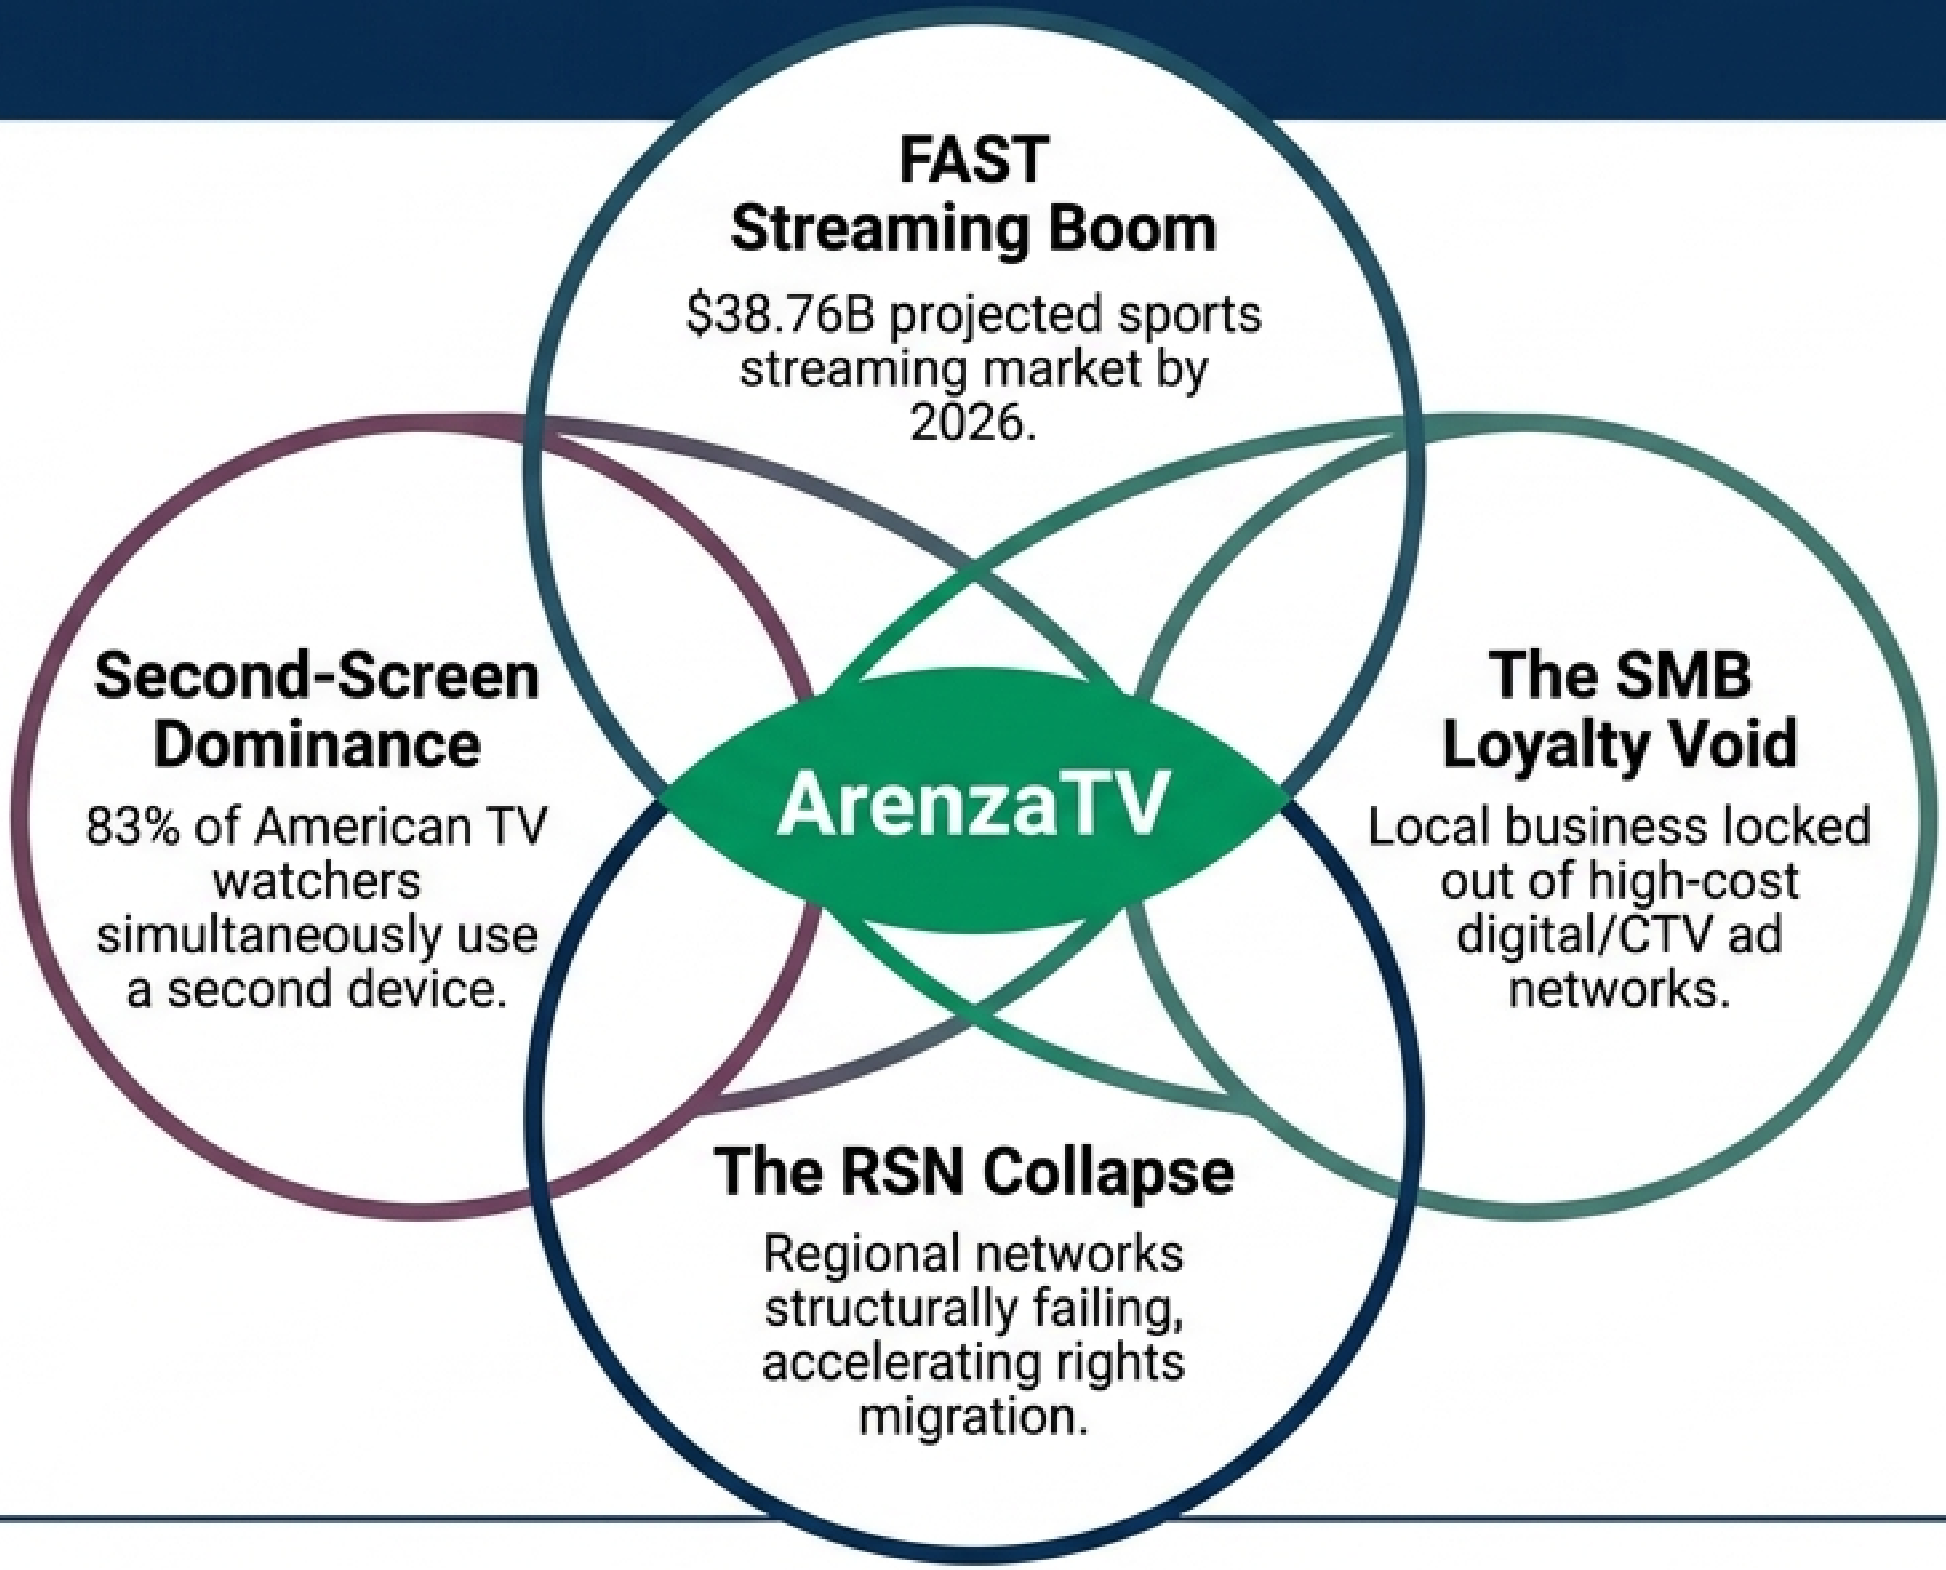
ArenzaTV

The Nexus of Sports Viewership and Local Commerce

Business Model Validation, Market Opportunity, and Proprietary Infrastructure.

Capturing the $20B/yr local and regional sports TV ad spend by connecting live free ad-supported streaming television (FAST) directly to verified, hyper-local foot traffic.

The Perfect Storm of Market Convergence



Operating at the exact center of disruption, backed by 5 validated market hypotheses and a revolutionary DePIN infrastructure.

The Unstoppable Migration to FAST Sports

The Market Reality

Sports online live video streaming is expanding at a 21.6% CAGR, reaching $38.76B by 2026.

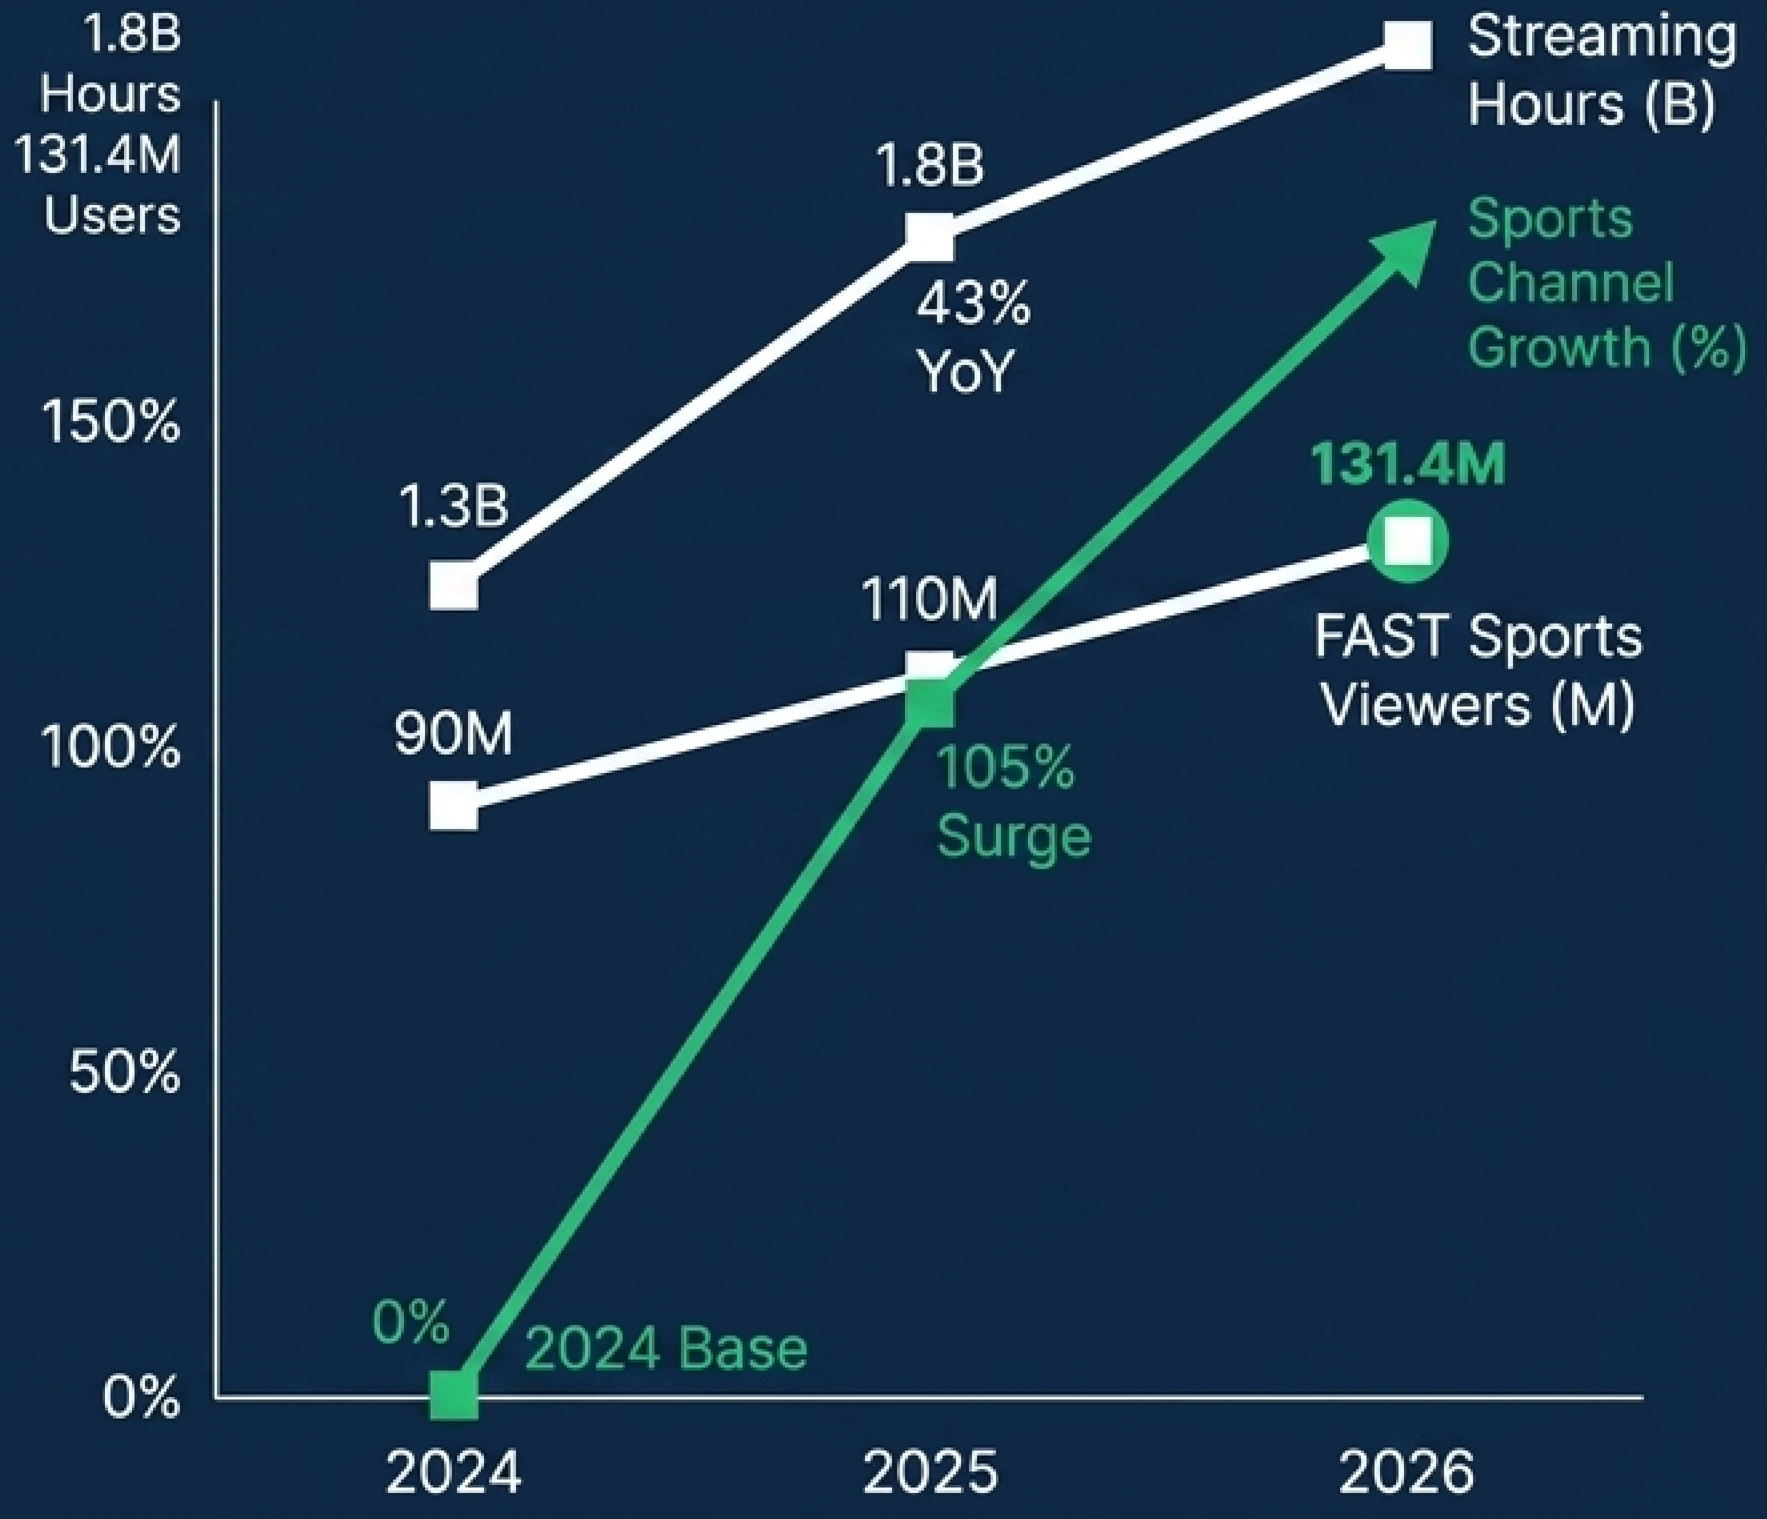
The Audience Scale

U.S. FAST users will hit 131.4M in 2026 (54% of all CTV users). Viewers streamed 1.8B hours through August 2025 (up 43% YoY).

Sports as the Catalyst

Sports is now the No. 2 FAST genre. Between 2024 and 2025, the number of sports channels on FAST platforms surged by 105%.

FAST Sports Viewing & Channel Trajectory



The Second-Screen Reality: A Massive Engagement Surface

The Behavior

83% of viewers use a second screen while watching TV.

The Scale

By 2026, 216.8 million U.S. adults (80.6% of the population) will use a smartphone as a second screen.

The Intent

65% look up information or visit an advertiser's site while streaming.

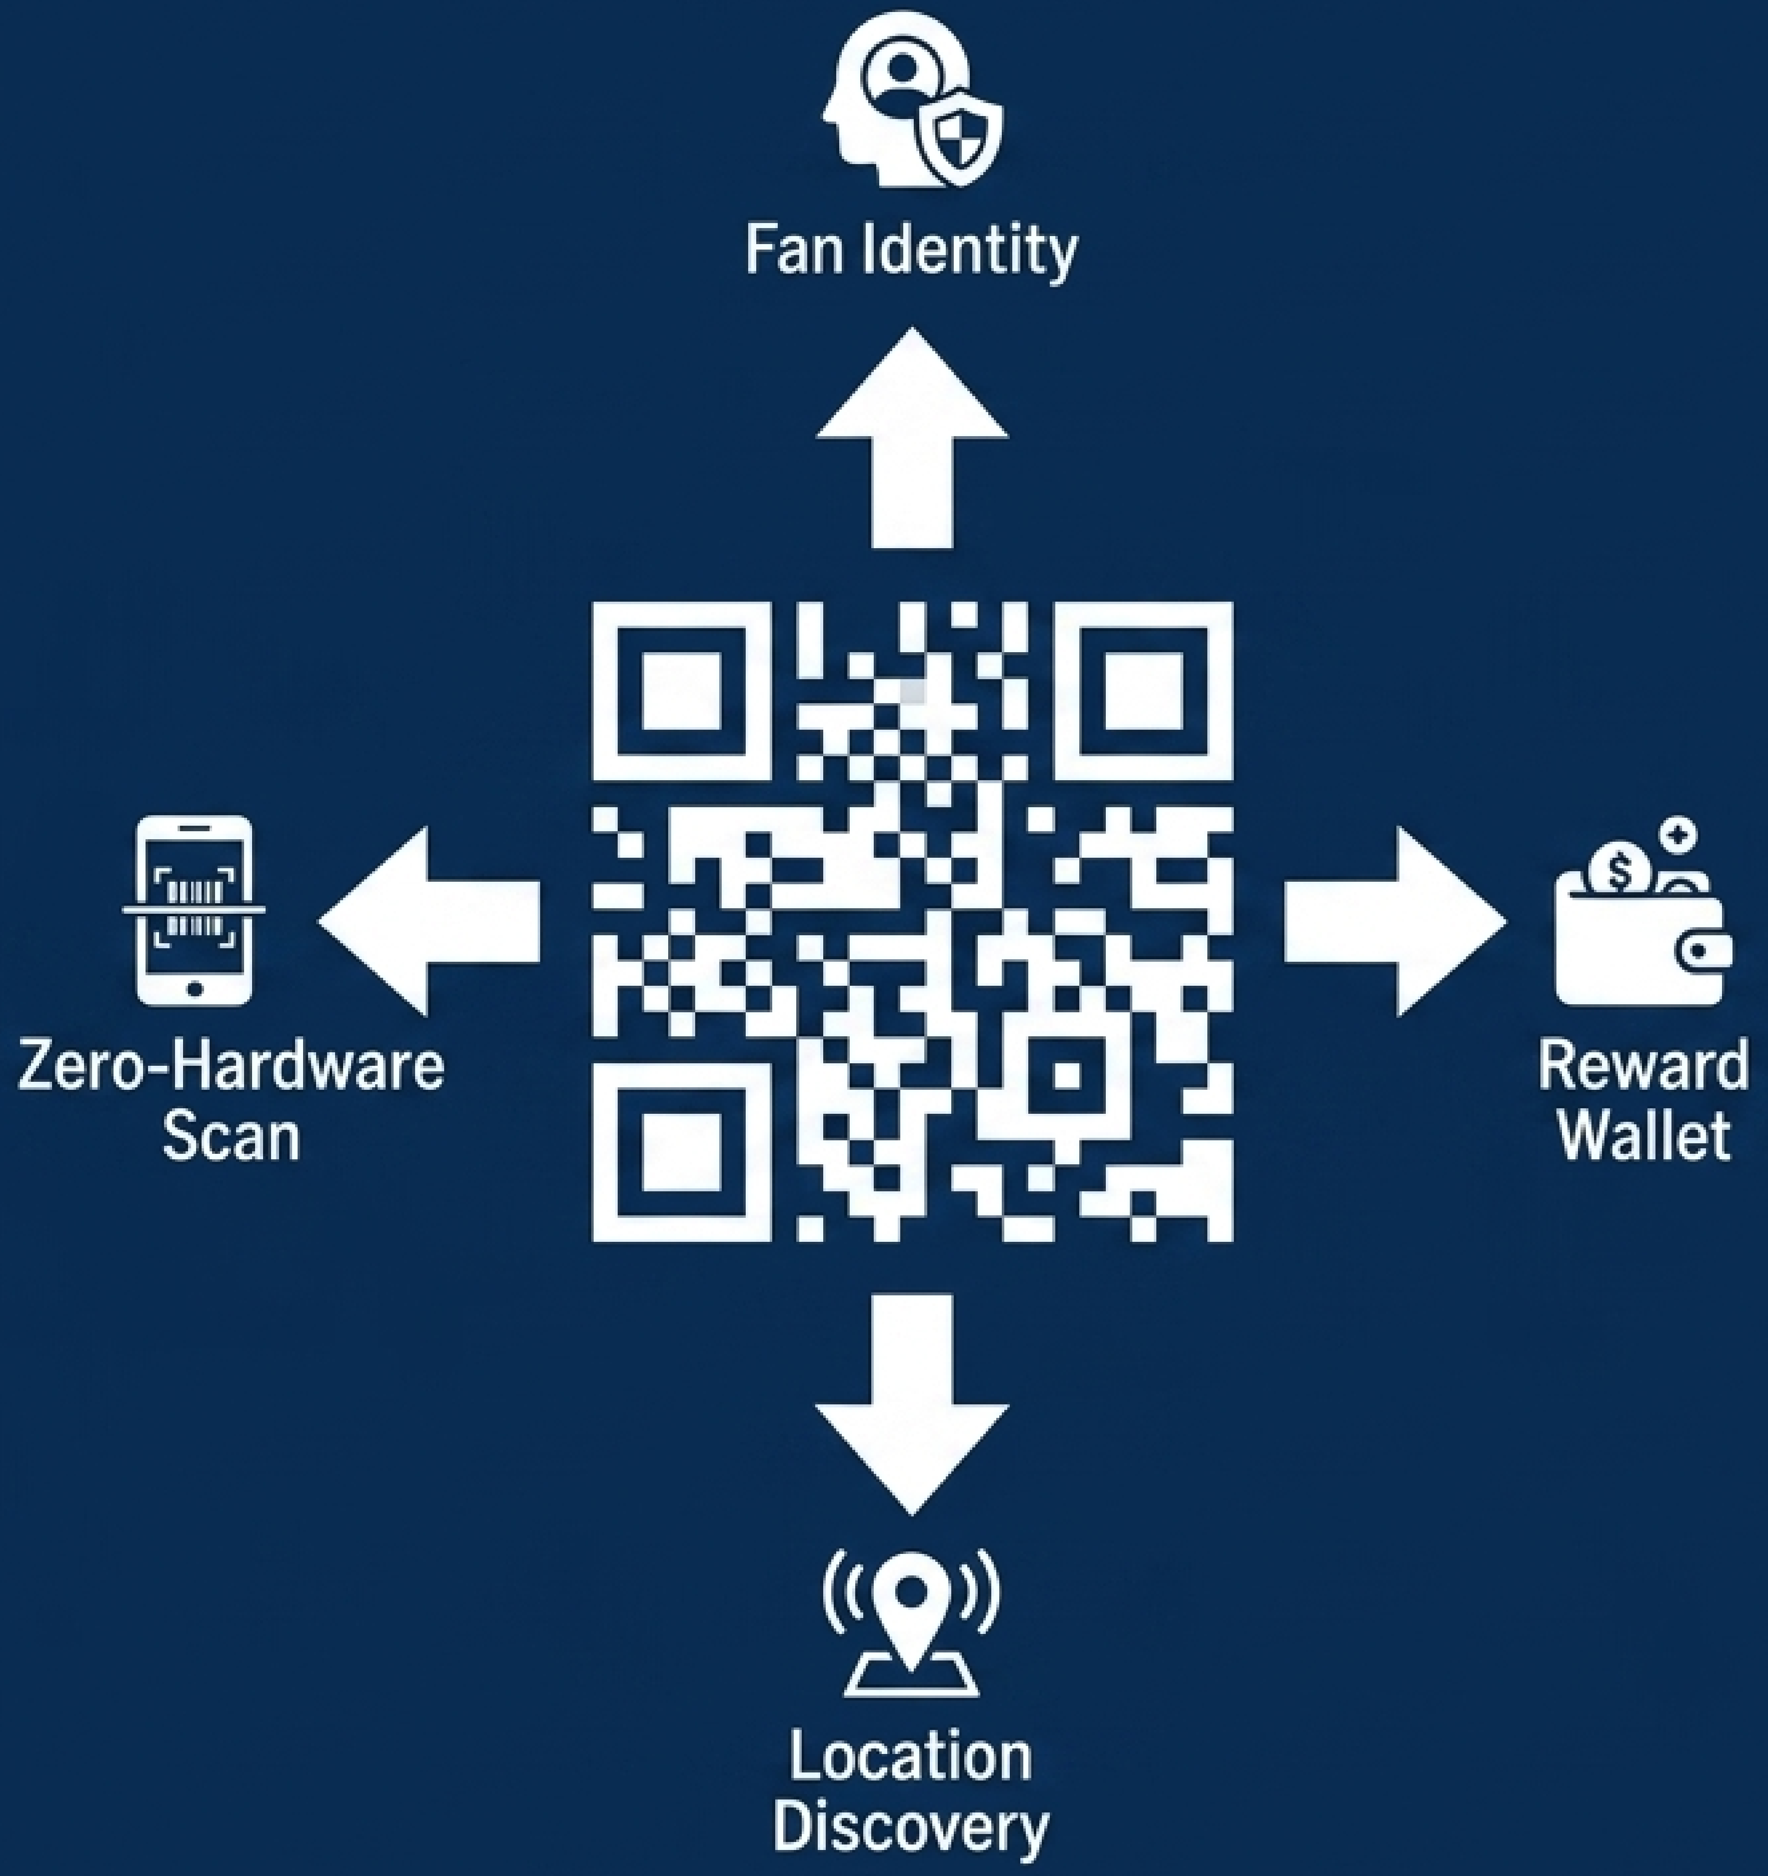
34% of sports viewers visit an advertiser's app or site during the game.

The Unsolved Problem: The Local Ad Gap & POS Friction

The Paradigm Shift: Frictionless Local Attribution

Paradigm Shift Matrix

Legacy Local Ad Model	Original Arenza Model	The Revised ArenzaTV B2B2C Model
Expensive CTV	SaaS reliant	• **Zero POS Integration:** Absolutely no hardware required.
Zero attribution	Required POS hardware integration	• **Revenue Pivot:** Ad-revenue sharing from FAST partners funds the reward pool.
Massive POS friction	Slow merchant adoption	• **Fan Acquisition:** Acquired natively through FAST channel content, eliminating the cold start.



The QR-as-Hub Architecture

1. Fan Identity: Secure, anonymous user tracking.

2. Reward Wallet: Real-time point balances stored entirely in-app without blockchain settlement requirements for the local merchant tier.

3. Location Discovery: Passively connects fans to participating businesses nearby.

4. Zero-Hardware Scan: Merchant scans the fan's app with their own smartphone. Operationally identical to a paper coupon.

Market Readiness: Over 100M Americans will use QR codes by 2026. 82% of consumers are comfortable scanning them.

Gamification: The Retention Engine

The Mechanic

Synchronous free-to-play prediction games and social mechanics deployed during live games.

The Results

Best-in-class gamified apps achieve **Day-30 retention rates of 30-40%** (double the 15-25% industry average) when rewards trigger in real-time.

Regulatory Compliance

Purely social prediction mechanics earning local business rewards. Sits entirely within Apple App Store guidelines and avoids SEC/state gambling regulations.

The Unfair Advantage: The World's First DePIN based on MOQ

The Infrastructure

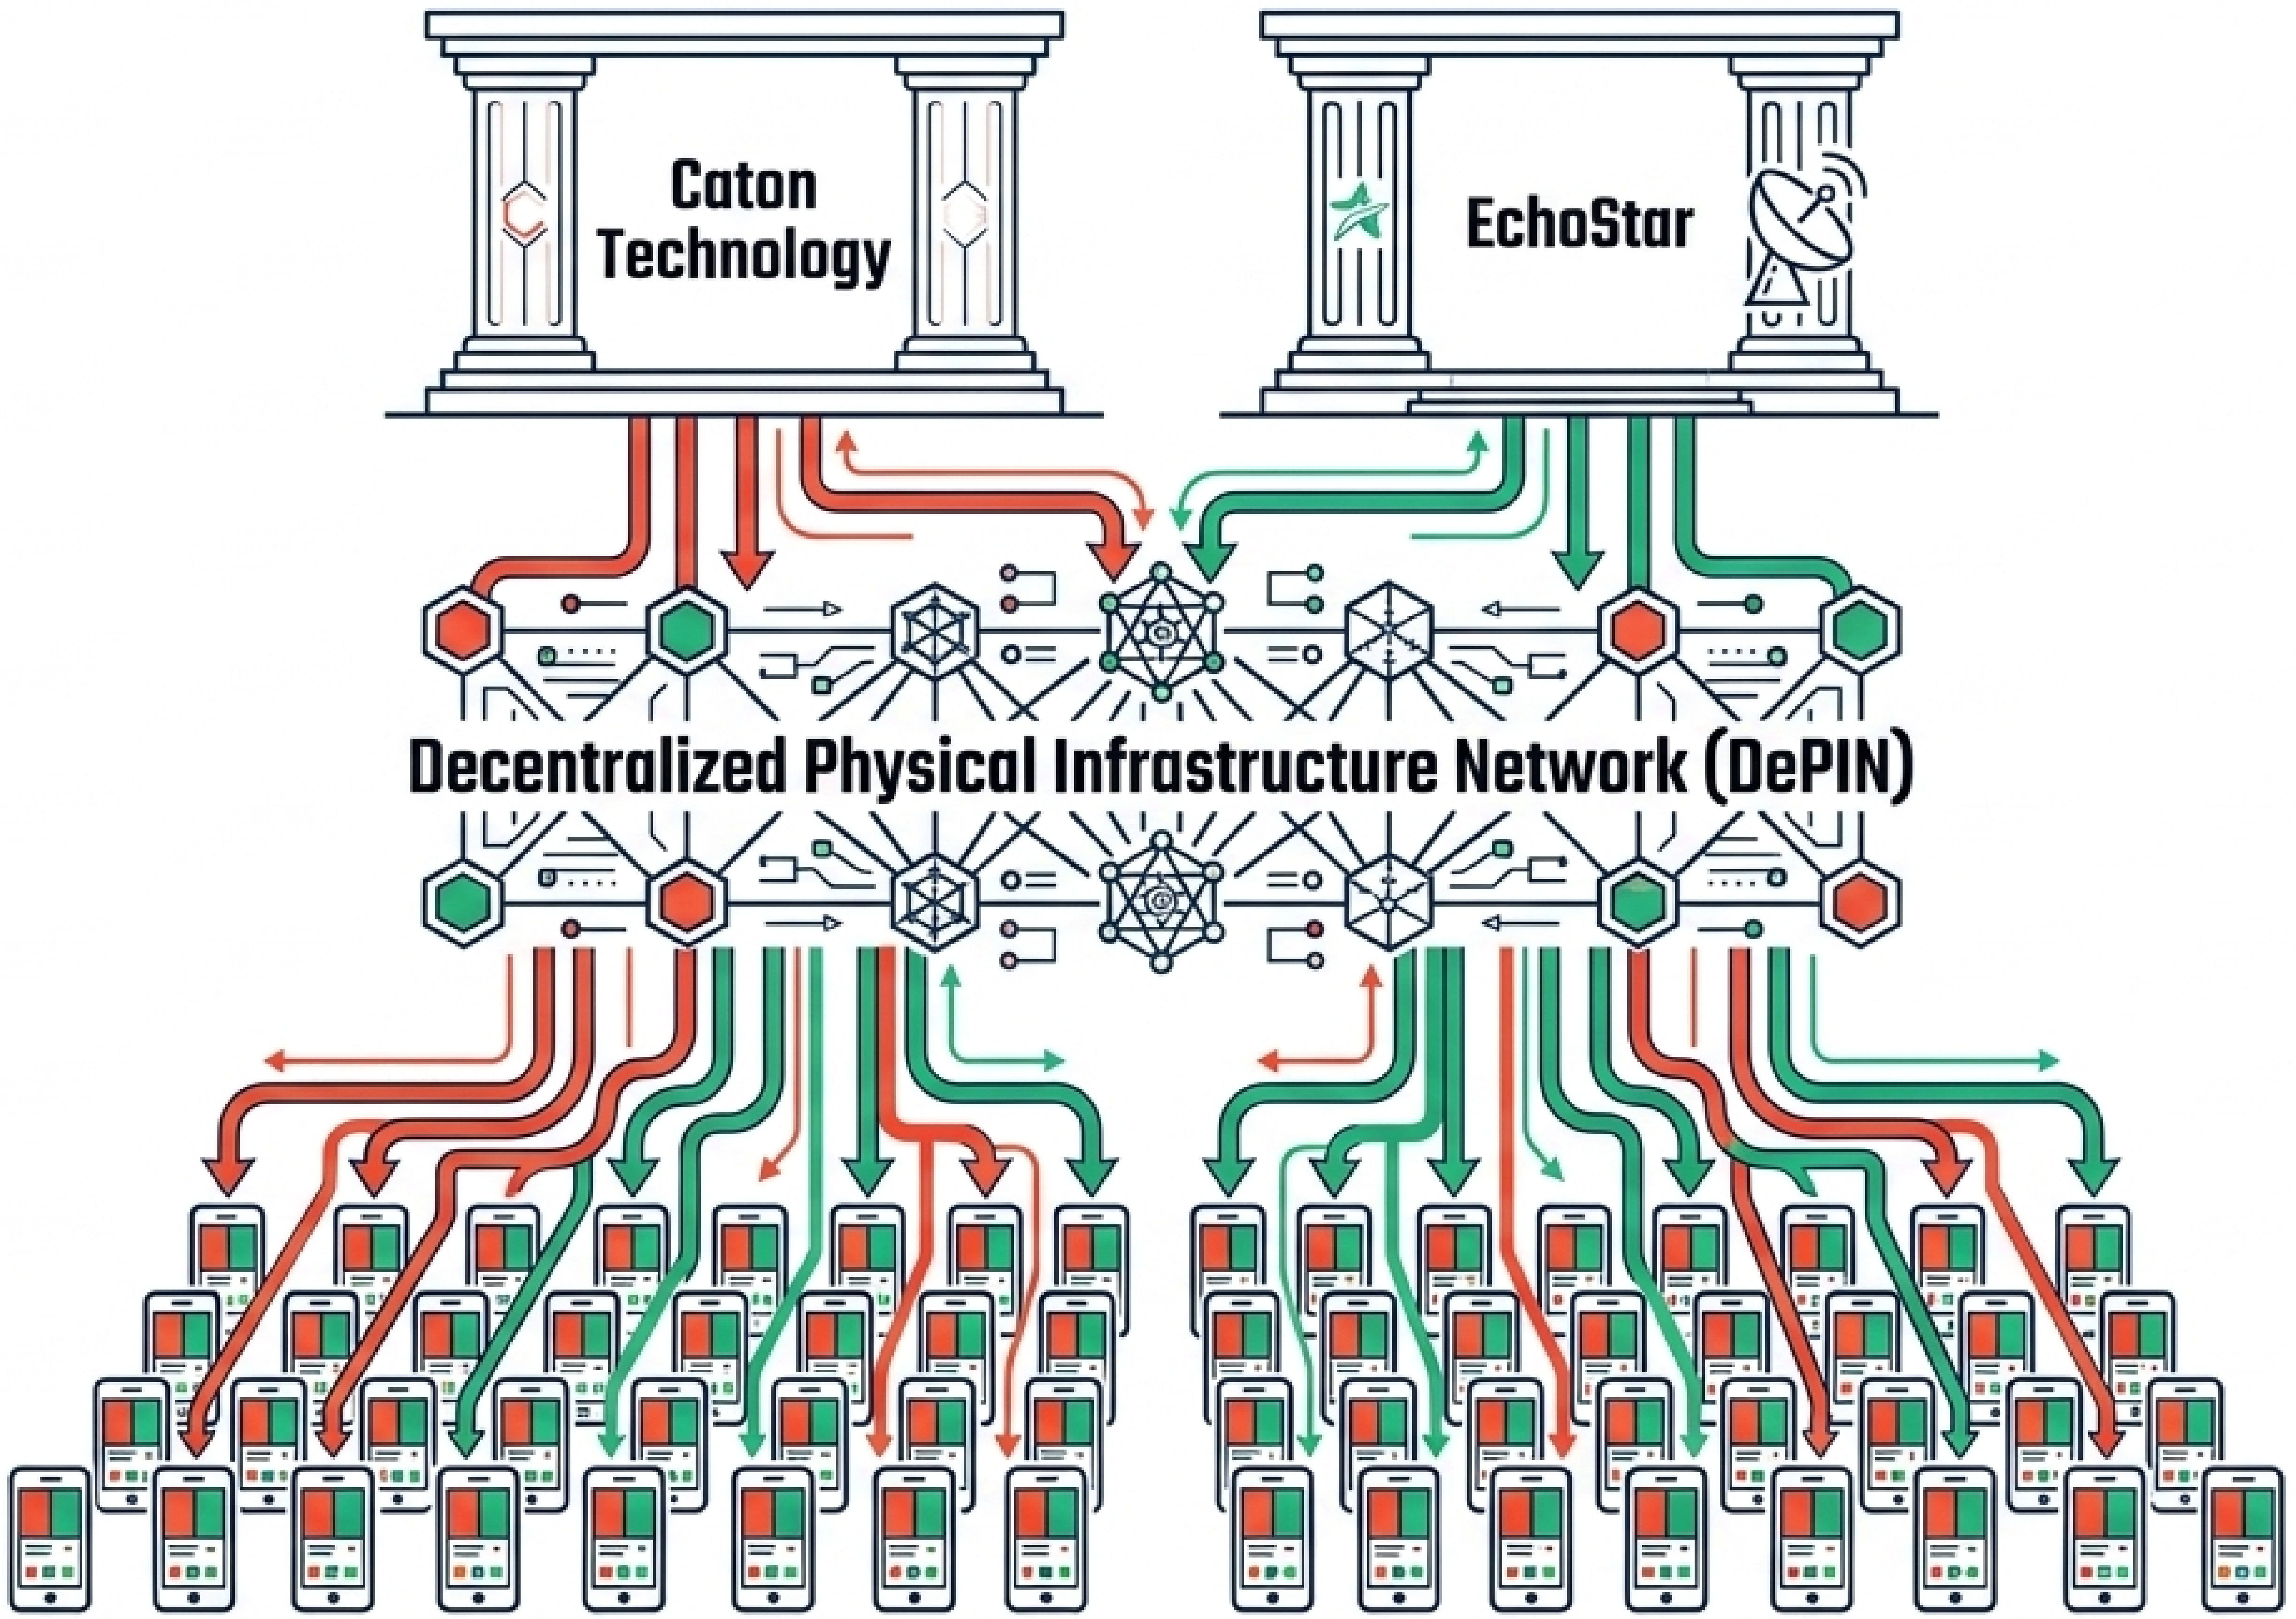
In an exclusive partnership with Caton Technology and EchoStar, ArenzaTV is building a Decentralized Physical Infrastructure Network (DePIN).

The Protocol

Powered by Media over QUIC (MOQ).

Why It Matters

This proprietary network enables ultra-low latency streaming required for truly synchronous, split-screen sports gamification. It scales efficiently at a cost profile legacy platforms cannot match.



The FAST Partnership Landscape

As RSNs collapse, local broadcasters are actively seeking monetization partners.

Immediate Targets (Tier 2/3)

E.W. Scripps / SSN

Ad inventory share on local sports content.

Local Broadcast Affiliates (OTA)

Direct content licensing and local ad co-sell.

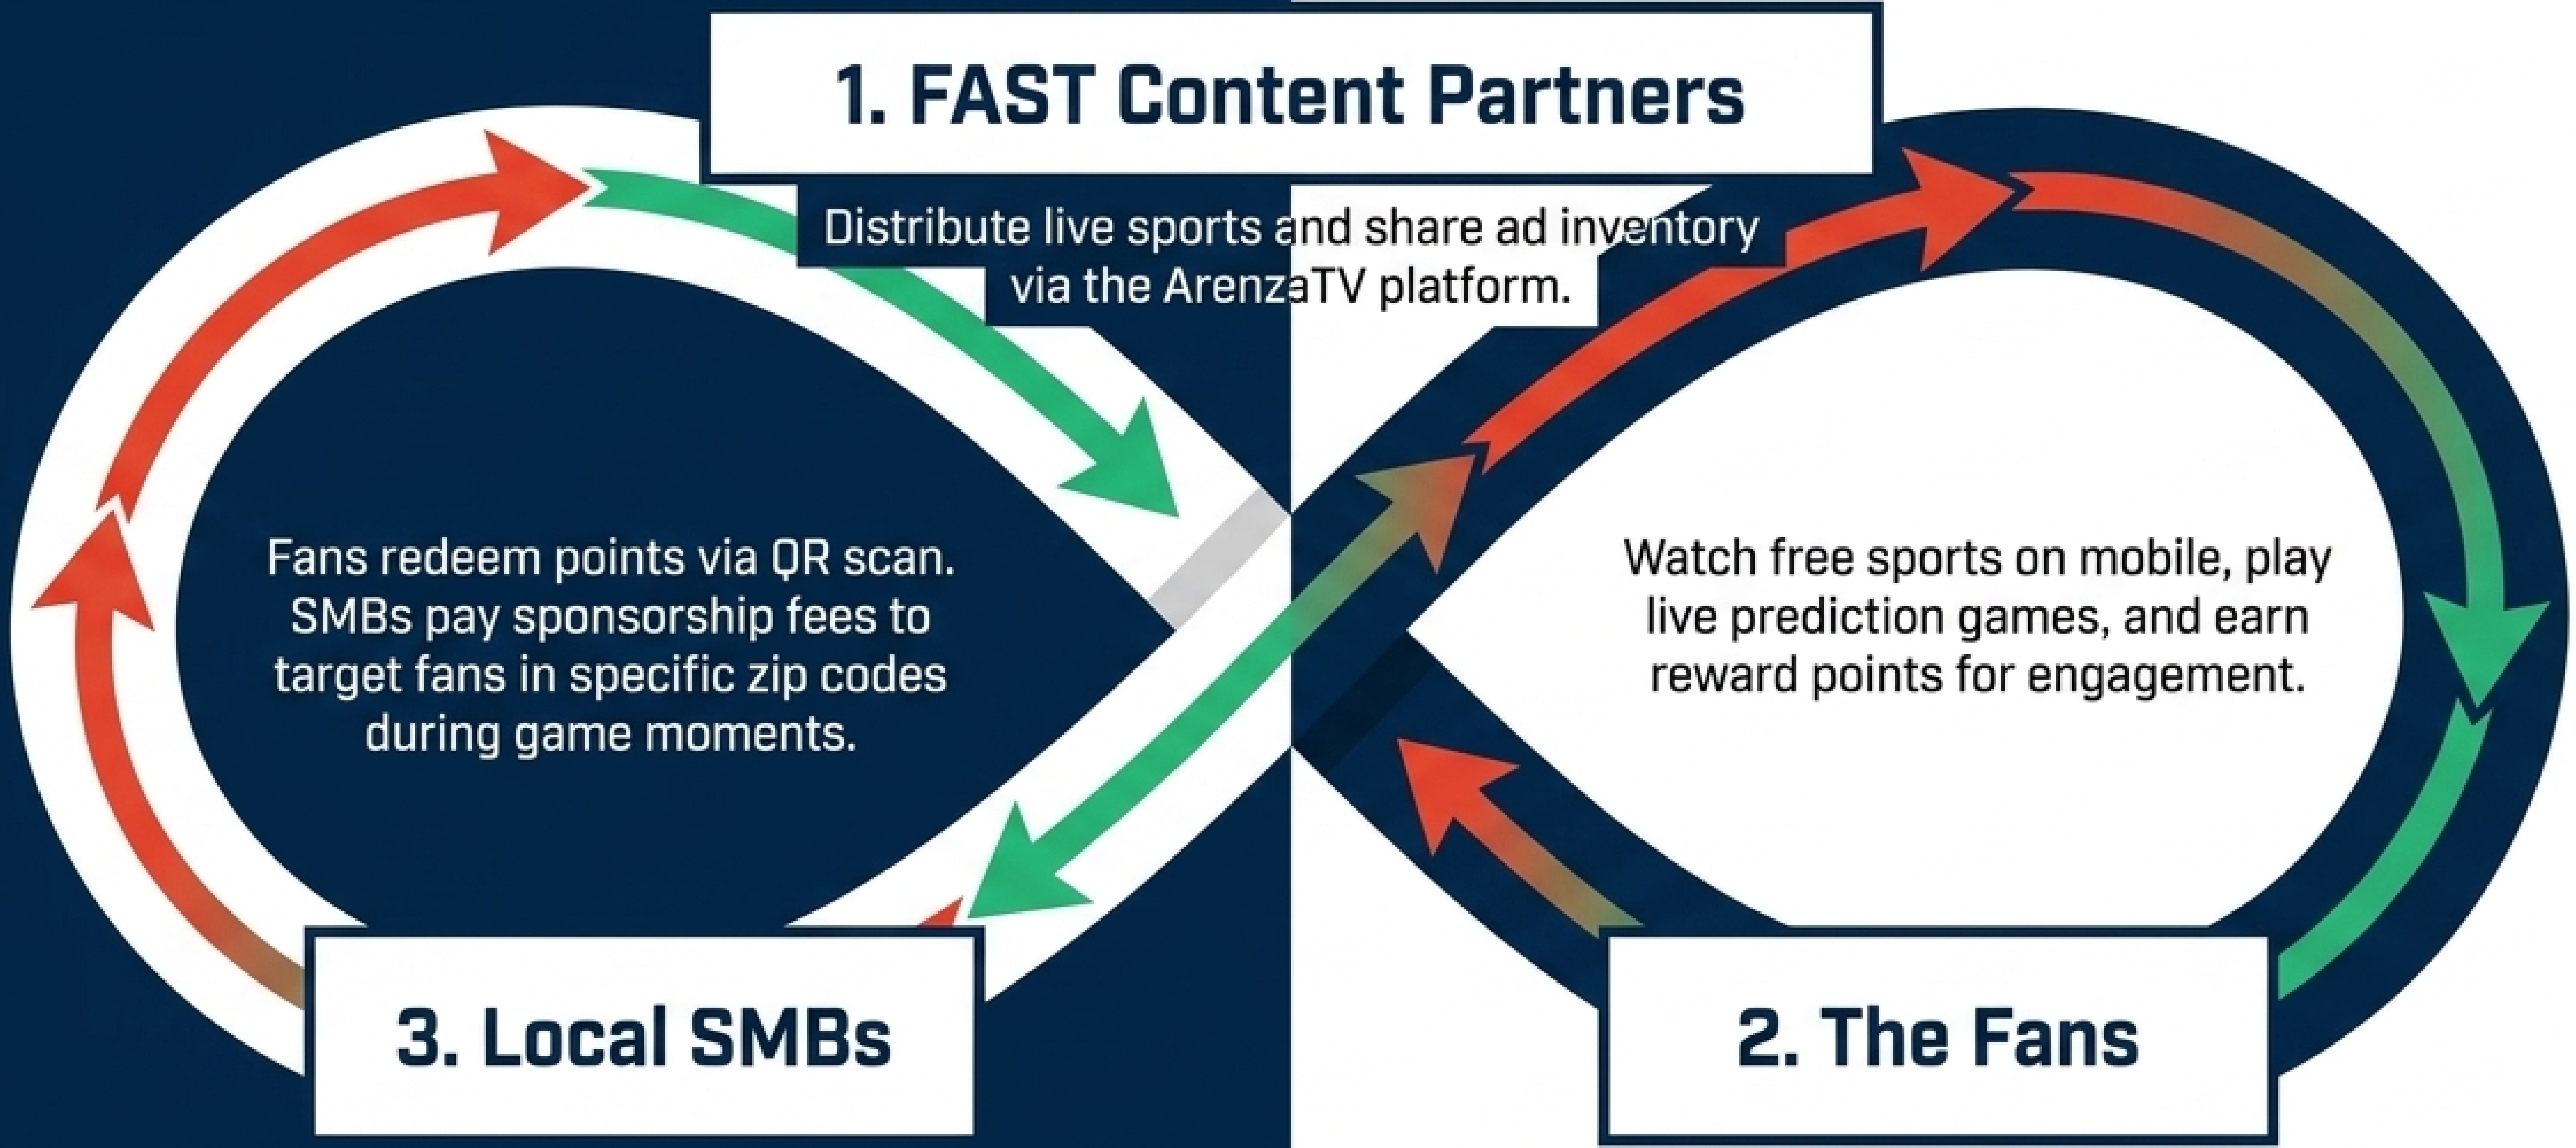
Stadium

Niche sports audience engagement.

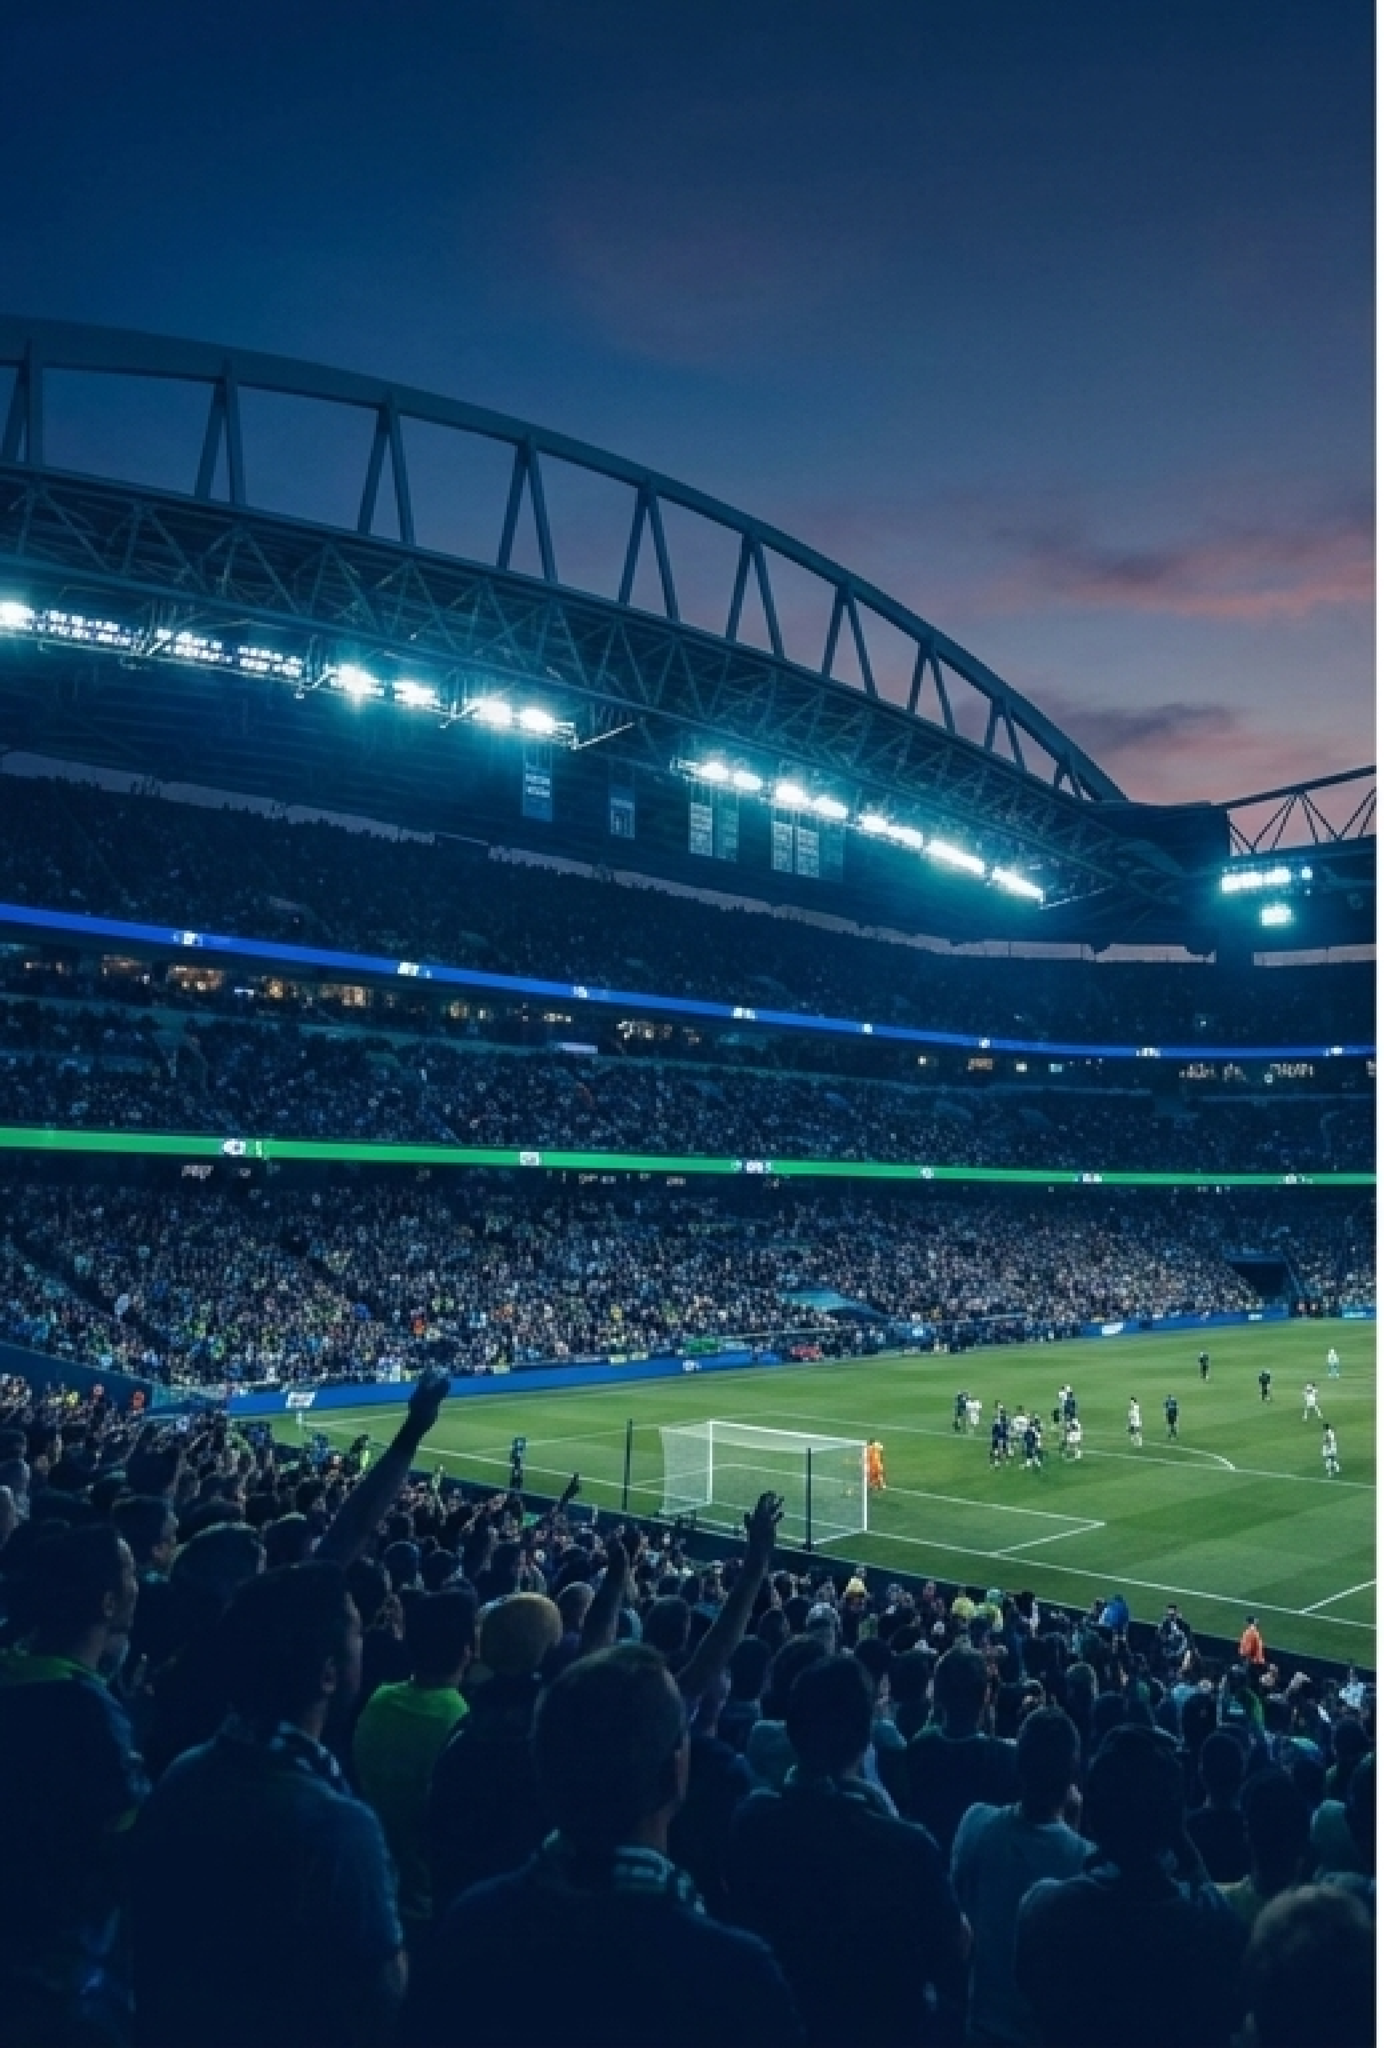
Secondary Targets (Tier 1)

Tubi	Pluto TV	Roku Channel
Ad insertion partners for broader sports content.		

The Two-Sided Loop at Scale



The Result: ArenzaTV earns via FAST ad revenue share + local business sponsorship fees. No cold starts, no POS hardware.



Diagnosing & Mitigating Structural Risk

Rights Licensing

Challenge: Tier-1 pushback on revenue-share models.

Mitigation: Aggressively targeting Tier-2/3 properties (Scripps, OTA, PWHL) actively seeking hybrid monetization models.

FAST CPM Headwinds

Challenge: FAST CPMs currently sit below linear equivalents.

Mitigation: Layering local SMB sponsorship fees on top of standard ad revenue to significantly boost overall yield.

App Store Compliance

Challenge: Apple gambling guidelines.

Mitigation: Architectural commitment to purely social prediction games utilizing localized, non-cash rewards.

VALIDATION POINTS

- **Market Validated:** 131M FAST viewers and 83% second-screen dominance.
- **Friction Eliminated:** QR-hub architecture removes the POS barrier, unlocking 4.8x loyalty ROI.
- **Technology Proprietary:** The world's first MOQ-based DePIN via Caton Technology and EchoStar.
- **The Bottom Line:** Transforming passive streaming into verifiable, hyper-local commerce.
