

The CMXS Infrastructure Engine Engine

Solving the \$84B Ad Verification Gap
with MoQ, DePIN, and Base L2.

THE TRANSPARENT PIPELINE: CRYPTOGRAPHIC PROOF-OF-DELIVERY

THE OPAQUE PAST

TELEMETRY WARNING

- ⚠️ **\$84 BILLION** ANNUAL FRAUD RISK
- ⚠️ **1 IN 5** CTV IMPRESSIONS ARE FAKE.

UNVERIFIED TIER: \$15–\$25 CPM

THE TRANSPARENT FUTURE

VERIFIED TIER: \$45–\$65+ CPM

PREMIUM LIVE SPORTS CONTENT IS TRAPPED IN THE UNVERIFIED TIER BECAUSE LEGACY INFRASTRUCTURE CANNOT PROVIDE INDEPENDENT, TAMPER-PROOF PROOF OF DELIVERY. ADVERTISERS WILL PAY PREMIUM RATES, BUT ONLY FOR CRYPTOGRAPHIC CERTAINTY.

CMXS is a structural moat. No competitor combines decentralized physical infrastructure, programmatic real-time bidding, and on-chain verification into a single Channel-in-a-Box.

Protocol	Glass-to-Glass Latency	Scale Ceiling	Ad Insertion	Resulting CPM Tier
Traditional HLS/DASH	10–30s	Unlimited (high CDN cost)	SSAI stitching	Unverified: \$10–\$25
LL-HLS	2–5s	Unlimited	SSAI limited	Unverified: \$10–\$25
WebRTC	100–500ms	~1,000 concurrent max	None	N/A
CMXS MoQ (Caton)	Sub-300ms	Millions concurrent	SGAI + SSAI	Verified: \$45–\$65+

WebRTC cannot scale. LL-HLS relies on TCP buffering. Media over QUIC (MoQ) is the only protocol achieving CDN-scale fan-out with real-time latency.

P50 Latency: 287ms | P95 Latency: 312ms

Step 2: Sub-600ms OpenRTB Auction

SSP routes request to DSPs, resolving auction without buffering.

Step 3: QUIC/UDP Delivery

Packets move independently, bypassing TCP head-of-line blocking.

Step 1: The SCTE-35 Trigger

Marker inserted into live sports feed (e.g., timeout).

The Edge Network

5,800 EchoStar tower sites registered as DePIN delivery nodes, connected via dark fiber/MPLS.

Tertiary Layer

Consumer devices acting as localized IP data relays.

This is not a 'cold-start' crypto network.

CMXS inherits a massive, deployed physical footprint. The nearest EchoStar tower handles the final hop, bringing sub-300ms delivery to every local DMA.

The Proof-of-Delivery (PoD) Vault

100% Ad Completion Beacon

Key 1 (Client-Side)

Viewer's device generates unique ECDSA signature (node ID, segment ID, timestamp).

Key 2 (Oracle-Side)

Off-chain CMXS Oracle verifies signature and checks ML anomaly scoring against bot patterns.

The Mint

DeliveryOracle.sol executes on Base L2. Mints permanent on-chain receipt and releases 0.001 CMXS reward.

An independently auditable ledger that completely removes human reporting from the \$45 CPM billing cycle.

THE BURN-MINT EQUILIBRIUM

The 35-Second Economic Engine

Three revolutionary technologies, synchronized in under 35 seconds, with zero human intervention.

The CMXS Channel-in-a-Box Engine

Zero upfront capital expenditure for the rights holder. CMXS handles the entire 5-layer stack for a 15% performance fee on the uplifted CPM.

Unit Economics Dashboard (Single Standard Sports FAST Channel)

Audience

500,000

Monthly Active Viewers
(1.5 hrs/session)

Inventory

4,000,000

Monthly Impressions
(3 ads/hour)

Value

\$45

Verified CPM

Gross Monthly Ad Revenue:

\$180,000

Content Partner Share (85%):

\$153,000 / month

CMXS Platform Fee (15%):

\$27,000 / month

(\$324,000 / year)

Commerce Upside

+ \$1,800/month

Generated by x402 interactive
shoppable commerce overlay
(assumes 3% conversion, 1.5% fee).

The Global Giants (DAZN / LIV Golf)

Pain

Distributing to 200+ markets
but trapped in \$15-\$25
unverified CPMs.

Solution

PoD API Licensing.
Upgrades existing
architecture to verified tier
without rebuilding apps.

Local TV Broadcasters

Pain

Nielsen abandoned 137 small
US markets in March 2026.
Severe loss of measurement
credibility.

Solution

Blockchain-verified PoD
provides a mathematically
perfect, instantly auditable
replacement for Nielsen.

The Viewer as Node

Pain

High CDN costs for
global scaling.

Solution

Background CMXS Node
Service in Roku/FireTV app
pays viewers to relay IP
data, establishing
localized DePIN edge.

Year 3 Revenue Model

1

Conservative

5M Viewers

\$42 CPM

\$7.2M Annual Revenue

2

Base Case

12M Viewers

Target FDV

Initial TGE structured at **\$150M-\$200M FDV** to provide institutional upside as the Burn-Mint mechanical flywheel activates

CMXS Foundation (Cayman Islands)

- Holds IP, issues tokens, manages treasury
- No shareholders, governed by council
- Shields tokenholders from liability (addressing Samuels v. Lido DAO)

Arm's-length Services Agreement

CMXS Inc. / LLC (Delaware)

- Employs staff, holds commercial contracts (EchoStar, DAZN)
- Conducts Reg D 506(c) pre-sale for accredited investors

Compliant with SEC's March 2026 interpretive release. CMXS classified firmly as a "Digital Tool" exempt from securities classification.

Real Infrastructure. Real Fiat Revenue. Cryptographic Proof.

Every dollar of advertising revenue creates mechanical deflationary pressure on the CMXS token. We are not launching a token to fund an idea; we are launching a settlement mechanism that makes a \$49.6 Billion market mathematically perfect.
