

ARENZA SPORTS FAST PLATFORM

INDUSTRY VALIDATION & IMPLEMENTATION BLUEPRINT

SCAN TO ACTIVATE ARENZA
FAST & UNLOCK REWARDS

The Convergence: Arenza sits at the precise intersection of the \$93.79B loyalty and \$12.28B FAST advertising markets.

The Broken Model

Standard video ads interrupt and fail.

The New Reality

The audience already has the phone in their hand.

Low-Latency Live Sports FAST

Content is never interrupted.
Server-Side Ad Insertion (SSAI) is
suppressed in the primary feed.

Synchronized Gamified Ad Zone

Opt-in interactive layer. Rotating
mechanics (Spin-to-Win / Scratch
Card) generating 3.31% engagement.

In-App QR Reward Wallet

Dynamic QR tokens mapped to local
SMBs for physical redemption.

Structural Ad Fatigue Immunity: Presenting non-interruptive value alongside content.

The White Space: Competitive Positioning Matrix

The intersection no one else occupies.

Platform	Video Layer	Interactive Layer	Local SMB Targeting	QR Attribution	Offline Redemption
Arenza	Sports FAST stream	Gamified spin/scratch	✓ Location + preference	✓ POS-linked	✓ Physical reward claim
Roku Ads Manager	CTV/streaming	QR overlays, shoppable	✓ Zip-level geo	Partial	✗
StreamLayer	Sports live stream	Polls, predictions, stats	✗ Enterprise only	✗	✗
BrightLine	CTV	Remote-interactive games	✗ National brands	✗	✗
Genius BetVision	Sports live stream	Betting integration	✗	✗	✗
DraftKings x Amazon	NFL/NBA streams	Odds, parlays	✗	✗	✗
Tubi	FAST broad	Standard pre/mid-roll	✓ Regional data	✗	✗

Arenza stands entirely alone in the “Local SMB Targeting + Offline Redemption” intersection.

Industry Validation: The Giants Are Circling

Core Strength 1: The 'Holy Grail' of Attribution

Validation: Foursquare data proves CTV-exposed users drive 2.93% conversion rates at physical locations.

Core Strength 2: Unlocking the Local SMB Market

Traditional Premium Sports Ad Buy

National scale required.

\$30-\$60 CPMs.

Multi-million dollar commitments.

Result: Completely inaccessible to a local sports bar.

Arenza Self-Serve SMB Portal

Sub-15-minute onboarding.

Zip-code level geo-targeting (default 5-mile radius).

\$200-\$500 campaign entry point.

\$25-\$45 CPM.

Result: Local restaurants sponsor live sports with trackable POS ROI, rivaling Google Search's \$2.05 CPC.

Core Strength 3: The Zero-Party Data Engine

A self-sustaining, privacy-first data moat built entirely on voluntary, zero-party engagement (validating the Sportradar FanID model).

Risk Mitigation 1: Solving the Companion App Drop-off

The Risk

Companion apps lose **70-80%** of users in 30 days due to lack of habituation. ↓

The Fix

Shift from passive reward volume to **active “Temporal Hooks”** and **outcome-linked prediction mechanics**.

Pre-game/in-game/post-game loops generate **20–40% higher session time** and **15–30% higher retention**. ↑

Temporal Hooks: The Game Day Journey

Risk Mitigation 2: Reframing the QR Scan Rate

The Industry Myth

BrightLine Benchmark:
0.004% median scan rate.

CTV-to-Mobile Bridging.
(High Friction, Cross-Device).

The Arenza Reality

Foursquare/Planters Benchmarks:
2.93% CTV attribution conversion /
70% scan-to-action on targeted mobile.

Context is everything. Arenza relies on mobile-to-POS presentation, structurally bypassing the notorious large-screen CTV scanning drop-off.

Technical Architecture: The 4-Layer Stack

Enterprise-grade infrastructure ensuring sub-500ms latency and fraud prevention.

The Blueprint: 3-Phase Implementation

KPI Baseline Targets

- DAU/MAU > 20%
- 1.8 spins/session
- 60% claim rate
- >35% 30-day retention

Phase 1: Core Product (Wks 1-12)

3 iOS + 2 Backend engineers. Split-screen video player, SpriteKit spin wheel, geo-targeting ad matching.

Milestone: TestFlight beta + Single restaurant advertiser pilot.

Phase 2: Growth (Wks 13-22)

Apple Wallet pass integration (PassKit), APNs push engine, Self-serve React web portal, Predict & Spin variant.

Phase 3: Scale (Wks 23-36)

Toast/Square native webhook integration, Overlay SDK for Apple TV/Roku (expanding to the 84.1% of sports ad spend on large screens).

Monetization & Unit Economics

Highly profitable baseline metrics per active restaurant.

Base SaaS Subscription: \$199

CPM Fee: \$112 (22,500 impressions @ \$5/CPM)

Redemption Fee: \$590 (5,906 redemptions @ \$0.10)

Total Gross Revenue: ~\$901/month per active restaurant advertiser.

Synthesis: The Durable Moat

Non-Interruptive Delivery

Solves the 68% ad skip rate through split-screen value alongside content.

Closed-Loop Attribution

Solves the programmatic guessing game via in-wallet QR-to-POS mapping for local SMBs.

Habit-Forming Gamification

Solves the 30-day companion app churn via temporal hooks and zero-party data matching.

Arenza is not just an application; it is the structural convergence of the FAST market expansion and the offline attribution demands of the local SMB market. The white space is defined, and the execution blueprint is ready.
