

Arenza Sports FAST Platform

The Architectural Solution to Structural Failures in CTV Advertising

A strategic pitch and industry validation blueprint proving that synchronized, gamified ad layers represent the inevitable convergence of the \$93.79B loyalty and \$12.28B FAST advertising markets.

The Convergence of Simultaneous Macro-Trends

Convergence Radar

The Arenza Model

FAST Expansion

Market restructuring audiences. Projected to reach \$31.82B by 2030; U.S. viewer base exceeded 216M in 2024.

Gamified Outperformance

Interactive formats achieve 3.31% engagement—triple that of passive video—and generate 6x engagement in retail.

Structural Ad Failure

Standard video ads breaking down. Mid-roll completion dropped from 82% to 57%; YouTube viewers skip 68% of pre-rolls within 5 seconds.

Second-Screen Habitation

Nearly 90% of sports fans use a second screen while watching; 69% search for product info after seeing an ad.

Offline Attribution Demand

Advertisers demand closed-loop ROI, which QR-to-POS mechanics finally provide for CTV environments.

Engineering Structural Ad Fatigue Immunity

The Interruption Model (Failing)

42.7% of global viewers run ad-blockers.

Average viewer watches only 2.1 out of 5.4 minutes of ads.

Format generates resentment.

The Opt-In Value Model (Arenza)

Delivers value alongside content, generating active engagement.

Boosts unaided brand recall by 36%, foot traffic by 13%, and brand affinity by 33%.

Format generates active engagement.

The Dual-Layer Mobile Architecture

Structural Advantage:

Eradicates the friction of CTV-to-mobile scanning by placing the video, the interaction, and the POS redemption wallet on the exact same device.

Major Streaming Platforms Are Converging on Synchronized Interactivity

Amazon + DraftKings

Integrated betting odds and same-game parlays into Prime Video TNF broadcasts.

Proves: Interactivity is now a core product feature, not an afterthought.

Genius Sports BetVision

Combined live video with real-time stats and integrated bet slips.

Proves: The direct structural analog (video + interactive layer in one screen) works at scale.

Roku Ads Manager

Launched a self-serve platform with interactive formats and Shopify integration.

Proves: The programmatic infrastructure for interactive CTV is fully active.

StreamLayer

Proved overlay-based interactive engagement lifts in-app session minutes by 2–3x on game day.

Proves: Embedded interactivity radically solves retention.

The Competitive Matrix Reveals a Highly Defensible Local SMB White Space

Platform	Video Layer	Interactive Layer	Local SMB Targeting	QR Attribution	Offline Redemption
Arenza	Sports FAST stream	Gamified spin/scratch	✓ Location + preference	✓ POS-linked	✓ Physical reward claim
Roku Ads Manager	CTV/streaming	QR overlays, shoppable	Zip-level geo	Partial	✗
StreamLayer	Sports live stream	Polls, predictions, stats	✗ Enterprise only	✗	✗
BrightLine	CTV	Remote-interactive games	✗ National brands	✗	✗
Genius BetVision	Sports live stream	Betting integration	✗	✗	✗
Tubi	FAST broad	Standard pre/mid-roll	Regional data	✗	✗

The Zero-Party Data and Offline Attribution Moats

The ProfileEngine (Zero-Party Data)

In-Game Behavior
& Preferences

Anonymized
CoreML Vector

Privacy-Safe
Targeting

Replaces third-party tracking (bypassing Apple ATT constraints) by collecting preferences voluntarily via game mechanics. **Validated** by Sportradar's FanID platform.

The Holy Grail of Local Marketing (Offline Attribution)

CTV Ad Impression
(\$25-\$45 CPM)

In-Wallet
POS Scan

Closed-Loop
ROI

Local businesses access premium sports audiences (competitive with Google Search's \$2.05 CPC) with **undeniable, deterministic proof** of in-person physical visitation.

Critical Risk Mitigation: Solving the Companion App Retention Cliff

The Structural Threat

Industry data reveals companion app retention drops 70–80% within 30 days.

Root cause: Downloaded for a single event, abandoned when novelty fades.

Engineered Countermeasures

Pre/In/Post-Game Temporal Hooks

Spin unlocks 30 mins before kickoff; time-boxed micro-moments tied to goals; post-game expiry extensions (generates 15–30% higher retention).

Predict & Spin Integration

Outcome-linked games (e.g., 'Predict next team to score') directly tie the commerce layer to the live broadcast content.

Format Rotation

Utilizing 'Scratch Cards' alongside the spin wheel to prevent mechanic fatigue (rewarded video analog shows 53–68% retention).

Overcoming QR Ceilings and Advertiser Sales Friction

The QR Scan Rate Misperception

The Threat

BrightLine data shows a **0.004%** median scan rate for CTV campaigns. The industry views QR as a high-friction ceiling.

The Arenza Reality

BrightLine measures high-friction TV-to-Mobile scanning. Arenza uses low-friction In-Wallet-to-POS presentation. Accurate benchmarks are Planters' **70%** scan-to-action and Foursquare's **2.93%** CTV attribution.

Local SMB Onboarding Complexity

The Threat

Local restaurants lack the technical expertise to buy programmatic CTV or integrate complex POS APIs, stalling the sales cycle.

The Arenza Reality

A self-serve portal mirrors Roku Ads Manager. Advertisers set budget, upload logos, configure rewards, and launch in under 15 minutes, utilizing Phase 1 iOS scanner apps to bypass immediate deep POS integration.

The Technical Stack Blueprint

POS Integration

Phase 1 iOS operator scanner.
Scales to REST webhooks for Toast,
Square, and Clover with HMAC-verified
payloads.

Game & Reward Engine

Server-authoritative logic
prevents client fraud.
HMAC-SHA256 signed JWT tokens (5-
minute TTL).
Redis rate limiting.

On-Device Profile Engine

CoreML local processing.
No raw data transmission.
Foreground Location Services for
5-mile geo-targeting.

Streaming Infrastructure

HLS/DASH ingestion.
Sub-500ms low-latency target (Phenix
Real-Time standard).
AVPlayer iOS native.

Predictable Unit Economics & Monetization Architecture

300 Daily Active Viewers

x 2.5 Spins

(22,500 monthly game sessions)

x 35% Win Rate

(7,875 rewards generated)

x 75% Claim Rate

(5,906 POS redemptions)

Revenue Output Box

Redemption Fee
(5,906 x \$0.10) = \$590

Base SaaS Subscription = \$199

CPM Fee
(22,500 impressions @ \$5/CPM) = \$112

**Total Gross Revenue per
Restaurant = ~\$901 / month**

Phased Implementation & Deployment Roadmap

- iOS split-screen player
- SpriteKit spin wheel
- AVFoundation operator scanner
- HLS FAST ingestion
- Single-restaurant TestFlight beta

Phase 1: Core Product
(Weeks 1-12)

- Apple Wallet pass integration (.pkpass)
- APNs Push Notification engine
- Predict & Spin variant
- Self-serve advertiser web portal

Phase 2: Growth Features
(Weeks 13-22)

- Native Toast/Square terminal webhooks
- Overlay SDK for CTV extension (Apple TV, Roku)
- Enterprise analytics suite

Phase 3: Platform Scale
(Weeks 23-36)

Synthesis: The Complete Arenza Moat

Arenza is not just a secondary screen app. It is the missing commercial layer for the sports streaming ecosystem—capturing the exact white space between national FAST broadcasters and localized retail commerce.
