

# ArenzaTV: The Future of Frictionless Sports Engagement

Validated Market  
Opportunities &  
**The DePIN**  
Infrastructure Leap.

Powered by a revolutionary partnership  
with **Caton Technology** and **EchoStar**.

# Five Colliding Market Forces Validate the ArenzaTV Model

# The Collapse of RSNs is Driving a FAST Sports Supercycle

## Market Scale

FAST market revenue projected to reach \$31.82B by 2030 (20.9% CAGR).

## Audience Reality

Gen Z averages over 6 hours daily on mobile, viewing sports in shorter bursts, highlights, and clips.

## The Mobile-First Shift

Mobile platforms remove the cable barrier.

54% of Gen Z rarely watch full games start-to-finish.

The audience has moved away from the living room couch to the commute, the bar, and the second screen.

# Local Businesses Are Locked Out of Ads and Trapped by POS Loyalty

## The Ad Gap

## The Friction Funnel

Loyalty programs yield a **proven 4.8x ROI**, but traditional systems systemically fail independent merchants due to **hardware costs** and **staff training** barriers.

# Eliminating the Hardware Barrier: The QR Hub Leap

| FEATURE             | Legacy POS Loyalty                 | The ArenzaTV QR Hub                       |
|---------------------|------------------------------------|-------------------------------------------|
| Hardware Required   | ✗ Expensive POS integration        | ✓ Zero (Merchant Smartphone)              |
| Customer Enrollment | ✗ Multi-step forms & app downloads | ✓ Instant FAST TV sync                    |
| Business Model      | ✗ High Monthly SaaS                | ✓ Zero upfront<br>(Ad-funded sponsorship) |
| Redemption Action   | ✗ Physical card or phone number    | ✓ Single QR scan                          |

Over 100M Americans will comfortably use QR codes by 2026.  
The unique Arenza QR code acts as identity, wallet, and location-based discovery.

# Second-Screen Gamification Turns Distraction into Purchase Intent

## The Behavior

**83%** of American TV watchers use a **second screen**. **65%** use it to look up info related to what they are watching.

## The Hook

Free-to-play (F2P) non-wagering gamification drives a **37% increase in user engagement**.

## The Retention

Best-in-class F2P sports apps achieve **30–40% Day-30 retention**—double the 15–25% industry average.

# The B2B2C Ecosystem Resolves the Market Fragmentation

# The Generational Infrastructure Moat: DePIN Powered by MOQ

## The Partnership

Through a strategic alliance with Caton Technology and EchoStar, ArenzaTV is building the world's first Decentralized Physical Infrastructure Network (DePIN) based on Media over QUIC (MOQ).

## Unprecedented Latency

MOQ ensures sub-second video routing perfectly synced with live prediction data.

## Decentralized Scale

A highly resilient edge network built specifically for high-density, real-time live sports engagement.

## The DePIN/MOQ Architecture Stack

# The Frictionless Attribution Loop in Action

**Step 1: Predict** (The Fan)

**Step 2: Generate** (The Tech)

**Step 3: Scan** (The Merchant)

**Zero POS integration. Zero token settlement for merchants. The loop closes instantly, pinging verified foot-traffic attribution back to the ad sponsor.**

# Stacked Revenue Streams Replace Traditional SaaS Models

By removing upfront merchant SaaS fees, we drastically accelerate SMB onboarding and reward density.

## 1. FAST Distribution Ad Revenue Share

Earning percentage splits (e.g., 50/50) from premium ad inventory inserted into the live broadcasts via partners like Pluto, Tubi, and Scripps.

## 2. Local Business Sponsorships

Hyperlocal, zip-code-level fees paid by SMBs to feature their specific rewards in the app's gamified ecosystem.

## 3. Premium Merchant Features

Optional upgrades for high-volume venues (e.g., featured placement, advanced analytics).

# A Fragmented FAST Landscape Offers Immediate Partnership Targets

| Provider Type                    | Key Players            | Partnership Opportunity                              |
|----------------------------------|------------------------|------------------------------------------------------|
| Broadcaster-owned FAST           | E.W. Scripps / SSN     | Ad inventory share on local sports (NWSL, PWHL).     |
| FAST Platforms                   | Pluto TV, Tubi, Xumo   | Ad insertion partners & native channel distribution. |
| Local Broadcast Affiliates (OTA) | Station-owned networks | Direct content licensing and local ad co-selling.    |

**Strategic Note:** The collapse of Main Street Sports leaves 29 MLB teams and numerous NHL/NBA properties actively searching for new monetization partners.

# Proactive Mitigations for Key Structural Risks

## **Risk: Content Rights Resistance**

(Tier-1 CPM pushback)

**Mitigation:** Targeting Tier-2/3 properties first (NWSL, Big Sky, Local OTA) who are eager to experiment with hybrid monetization.

## **Risk: Consumer Cold-Start**

(App download friction)

**Mitigation:** Distributing the engagement layer directly through existing FAST viewership pipelines, converting current viewers into app users via on-screen QR prompts.

## **Risk: App Store Compliance**

(Gambling classification)

**Mitigation:** Strict adherence to purely social, non-wagering prediction mechanics. Rewards are exclusively local business redemptions (no cash or crypto payouts).

# A Multi-Billion Dollar Disruption Opportunity

ArenzaTV sits perfectly at the intersection of streaming scale, localized advertising, and high-ROI fan loyalty.

# Redefining Local Sports Monetization at Scale

## The ArenzaTV Solution

### Validated Demand

Capitalizing on 131M+ FAST viewers and the massive gap in SMB local advertising.

### Frictionless Ecosystem

Eliminating POS hardware barriers with a zero-friction, QR-driven attribution loop.

### Unrivaled Moat

Built on the world's first Media over QUIC (MOQ) DePIN architecture for flawlessly synchronized live sports engagement.
