

The Screen-to-Store Playbook for Local Sports Streaming

Validating the B2B2C architecture that bridges FAST channel viewership, decentralized delivery networks, and local merchant attribution.

The Collapse of Legacy RSNs Creates a \$38.76 Billion Open Market

As legacy regional networks fail, sports rights are migrating to FAST platforms—creating a highly fragmented, massive open market primed for a unifying mobile platform.

The Second Screen Has Become the Primary Engagement Surface

83%
of American TV
watchers actively using
a second device while
watching.

216.8M
U.S. adults second-
screening in 2026.

4h 30m
average daily mobile
phone time per user
(up 52% from 2022).

Mobile platforms remove the cable subscription barrier and deliver sports access precisely where Gen Z and Millennials consume it: in shorter bursts, focused on social connection, outside the living room.

Independent Local Merchants Are Priced Out of the Streaming Revolution

Key Takeaway: Local businesses are locked out of the exact medium where their local customers spend their time, leaving attribution as the central unsolved problem in local sports advertising.

Traditional POS Loyalty Fails Operationally at the Small Business Level

The POS Bottleneck

The Missing Link

Verified
Attribution

Merchants require a zero-integration verification method to unlock loyalty ROI.

The Economic Imperative: 4.8x average ROI for loyalty programs; keeping a customer costs 6-7x less than acquiring one.

Pioneering the First DePIN Architecture Based on MOQ

- ▶ **Strategic Partnership:** Officially powered by Caton Technology and EchoStar.
- ▶ **The Architecture:** Building the first DePIN (Decentralized Physical Infrastructure) based on MOQ (Media over QUIC).
- ▶ **The Moat:** Delivers ultra-low-latency, high-quality sports streams directly to mobile screens, bypassing expensive legacy CDNs.
- ▶ **The Outcome:** Radically reduces content delivery costs, ensuring the ArenzaTV split-screen app scales flawlessly across millions of concurrent users.

The Validated Screen-to-Store Attribution Engine

Zero Integration: The Smartphone Becomes the Infrastructure

Market Readiness: Over **100M** Americans scanning QRs in 2026; **82%** of consumers completely comfortable scanning business QRs.

Zero Barrier: No POS hardware, no software integration, no staff training required. The unique QR code serves passively as identity, reward wallet, and location-based discovery.

Free-to-Play Gamification Drives Sustained Fan Retention

Engagement: Gamification in sports marketing drives a **37% increase in user engagement** and **31% improvement in brand recall**.

Retention: Best-in-class gamified apps achieve **Day-30 retention rates of 30-40%** (double the industry average).

Actionable Mechanics: **34% of second-screen viewers** already **visit an advertiser's app/site** during games.

Compliance Note: 100% Compliant: Purely social prediction mechanics earning **local business rewards** operate entirely within **Apple App Store guidelines**, avoiding all SEC/state gambling regulations.

Strategic De-Risking: The Revised Platform Architecture

Operational Dimension	Original Model	Revised Model
Verification Mechanic	POS Hardware Integration	Zero-Integration Smartphone QR Scan
Primary Revenue Engine	Merchant SaaS Subscriptions	FAST Ad Revenue Share + Local SMB Sponsorship
Fan Acquisition Pipeline	Dependent on Merchant Rollout	Leverages Existing FAST Channel Audiences

By pivoting revenue away from upfront merchant SaaS and eliminating POS hardware requirements, the revised model permanently removes adoption friction and consumer cold-start risks.

Navigating the Fragmented FAST Sports Partnership Landscape

The Target Zone (Tier 2/3 and Local) E.W. Scripps (SSN), Local Broadcast Affiliates (OTA), and RSN Successors Partnership Model: 50/60 revenue shares and local spot ad models. Ideal for ad inventory sharing.	Distribution Partners Xumo Play, Pluto TV, and Tubi Partnership Model: Distribution and ad insertion, leveraging their hundreds of millions of combined users.
Distribution Partners Xumo Play, Pluto TV, and Tubi Partnership Model: Distribution and ad insertion, leveraging their hundreds of millions of combined users.	Distribution Partners Xumo Play, Pluto TV, and Tubi Partnership Model: Distribution and ad insertion, leveraging their hundreds of millions of combined users.

Provider FAST Provider Landscape	Type Type	Sports Content Sports Content	Business Model Business Model	Partnership Opportunity Partnership Opportunity
E.W. Scripps / SSN	Broadcaster-owned FAST	PWHL, NWSL, MLB, NHL, Big Sky	50/60 revenue share	Ad inventory share on local sports content
Xumo Play	Platform (Comcast/Charter)	Multi-sport, CTV home screen	Ad-supported	Distribution partner for ArenzaTV channel
Pluto TV	FAST platform (Paramount)	CBS Sports, Fox Sports, highlight channels	Ad-supported, 400+ channels	Ad insertion partner for sports content
Tubi	FAST platform (Fox)	Fox Sports content, live college football	Ad-supported, 260 FAST channels	Ad inventory access for local sports
The Roku Channel	Platform FAST	NFL Channel, MLB.TV, FIFA+, Fox Sports hub	Revenue share	Localized ad slots tied to sports content
Stadium	Sports-dedicated FAST	24/7 college sports, basketball, baseball	Ad-supported	Niche sports audience with loyal fanbase
Local Broadcast Affiliates (OTA)	Station-owned	Local NFL, college, regional teams	Local spot ad model	Direct content licensing and local ad co-sell
NFL+, NBA App, MLB.TV free tier	League-direct	Preseason, select live games	Ad-supported free tier	Companion app / second-screen integration

ArenzaTV does not compete for Tier 1 rights; we arm Tier 2/3 broadcasters, local stations, and RSN successors with a definitive digital revenue and local co-sell engine.

Positioned at the Intersection of Three Expanding Multi-Billion-Dollar Markets

Capturing even a fractional percentage of the local sports ad spend through verified screen-to-store attribution unlocks a multi-billion dollar baseline TAM.

Built-In Hedges Against Structural Market Risks

The ArenzaTV Framework	Risk FAST CPM Headwinds (CPMs currently sit below linear TV). 	Mitigation Hedged structurally by layering high-margin local SMB sponsorship fees atop standard ad revenue shares. 
	Risk Content Licensing Friction. 	Mitigation Bypassing Tier-1 rights holders to target challenger leagues, local stations, and stranded RSNs highly motivated to experiment with hybrid monetization. 
	Risk App Store Compliance. 	Mitigation Mechanics are strictly non-cash and non-crypto. Purely social/local physical rewards circumvent gambling regulations entirely. 

The Technology is Secured. The Blueprint is Validated.

Market Confirmed:

Capturing the \$20B local sports ad vacuum left by collapsing RSNs.

Moat Established:

Powered by Caton/EchoStar MOQ and DePIN technology for flawless, low-cost mobile delivery.

Friction Eliminated:

Zero POS integration; powered entirely by 100M+ native QR users.

Ecosystem Locked:

A unified B2B2C loop driving broadcaster ad revenue, fan retention, and verified local merchant foot traffic.
